ABSTRACT:

PURPOSE: To provide a bathing agent composition containing a capsule obtained by coating a volatile bathing agent component with a film-forming substance, effective in suppressing the dissipation of the volatile component during production and storage and preventing the corrosion of the capsule material with the above component and the permeation of the component through the capsule.

CONSTITUTION: The objective capsule having a diameter of about $50\mu\text{m}$ to 5mm is produced by mixing (A) bathing agent components comprising an oil or fat such as olive oil, magnolia oil, glycerol, etc., and perfumery such as jasmine oil, lemon oil, rose oil, etc., with (B) other additives such as inorganic salts, inorganic acid, crude drugs, pigments, alcohols, polyhydric alcohols, surfactants, etc., according to the required medicinal benefits of the objective agent and coating the obtained mixture with a film-forming substance such as a water-soluble natural polymer (e.g. gelatin) or synthetic polymer (e.g. polyvinyl alcohol) e.g. by the curing and coating process in liquid.

EFFECT: Two or more kinds of flavors can be enjoyed by the use of single bath ing agent composition.
